

HRM Expo 2011: IQDoQ Presents Digital Personnel File with New Analytics and Reporting Feature

IQAkte Personal 2.2: InfoZoom consolidates information for personnel development and controlling

Bad Vilbel, August 11, 2011 – The document management software specialist IQDoQ, a subsidiary of the MATERNA Group, presents the integration of InfoZoom with the new version of its digital personnel file IQAkte Personal at the HRM Expo 2011 in Cologne, Germany. From September 20 to 22 trade fair visitors are invited to visit the booth of IQDoQ (hall 3.2, D.10) and see for themselves how to answer challenging questions concerning personnel development and controlling by using the digital personnel file with only a few mouse clicks.

How does the age pyramid in the company look like? This is one of many questions human resources departments have to take into consideration for a foresightful personnel planning. For this and similar kind of application scenarios IQDoQ has already setup flexible default queries in the IQAkte Personal 2.2 application. The visual appealing presentation of the results in business graphics enables human resources departments to rapidly gain an overview of the status quo. However, by using intuitive tools also customized queries may be answered within a few minutes in a substantial way. Here for example one may assess how high the demand for a training topic is across several departments. Then the generated report serves as a basis for the decision, whether a respective inhouse training would be economic.

”Our experiences with our clients and prospectives since the establishment of the business area IQAkten at the beginning of the year show that especially in human resources there is a strong demand for powerful digital file solutions which are easy-to-use and rapidly rolled out,” states Frank Rüttger, manager of the business area IQAkten. ”Thus the InfoZoom technology is the perfect choice for our product strategy. In accordance with our claim ‘Simple. Fast. Secure.’ we continue to develop our IQAkte Personal solution with every new release to a comprehensive tool to support human resources management from a qualitative point of view,” he adds.

Thus Version 2.2, which existing customers will get according to their maintenance agreement, provides some additional new features: By using the bulk letter feature personalized letters or forms including individual barcodes may be created for any number of recipients by the push of a button. In addition, the digital file has been enhanced with a new documentation and company section which among others contains a template which is compliant to the legal requirements of the required procedural documentation and which contains the user manual of IQAkte Personal. Here also company agreements or information material related to human resources may be stored, which results in a centralized knowledge store.

Presentation:

Title: How to gain valuable time for strategic human resources tasks with digital personnel file management (Mit digitaler Personalaktenverwaltung wertvolle Zeit für die strategische Personalarbeit gewinnen)
