

CeBIT 2009: IQDoQ offers insight into the new version of HyperDoc

(Bad Vilbel) IQDoQ GmbH (Hall 3 / Stand A29, Station 22) is presenting version 5.1 of its document management system HyperDoc® for the first time at CeBIT 2009. The emphasis of development for IQDoQ was on additional ease of operation. Thus user can view the course of processes directly from the transaction processing environment. Working with "virtual documents" also promises additional flexibility. User are empowered to gather information which belongs together to make an ad hoc file. Finally, expanded preview functions for the documents stored in HyperDoc facilitate fast, selective access. The release of version 5.1 of HyperDoc is anticipated for the second quarter of this year.
